What is WoodBlocX?

Learn about our award-winning product

NO ANNUAL MAINTENANCE REQUIRED

Modular timber system

WoodBlocX is a unique, patented system of interlocking timber blocks that can be used to design and build playground furniture, raised planters and seating areas. All projects are supplied as self-assembly kits for schools to build.

Beautiful outdoor spaces

The WoodBlocX system is a popular option for schools and nurseries to use when building outdoor learning spaces or improving playgrounds. Transform any external space with ease using our sustainable modular kits.

Free design service & support

Every project we supply comes with a full set of building instructions so school procurement teams know exactly what they will be getting. Through our Free Design Service, we can generate full project estimates within 72 hours with no obligation to buy.

Annfield School, Stanley, UK

WoodBlocX raised beds and benches were built by the students to create a wellness garden in the playground

The project has transformed the dull area into a new outside classroom where students can interact with the natural world

The planters were built block-by-block under supervision (on solid ground) and then filled with a wide range of plants

WoodBlocX for schools & nurseries

Enhance school and educational settings with our modular planters and outdoor furniture

Kirkhill Primary, Inverness, UK

Planter benches were built by students to transform a dull patch of grass in the school's playground

Building instructions were provided for the children to follow under supervision. No power tools or cutting was needed!

The benches with integrated planters have become a popular spot for the students to use at break time and for outdoor lessons

Enhance educational settings

Our modular planters and furniture can transform outdoor spaces

Create unique designs for play, learning or zoning in early years, primary and secondary schools using our unique modular timber system.

Our raised planters and street furniture kits are made from sustainable timber and provide a safe, clean and zero-maintenance option for procurement teams looking for a solution for projects covering all types of educational settings.

WoodBlocX timber is pre-treated with a water-based treatment, making it ideal for growing edibles and flowers. The structures create a beautiful natural touch to playground areas that are often heavily hard landscaped.

University Campus, Inverness, UK

WoodBlocX moveable planters enhance the entrance whilst deterring visitors from parking in pedestrian areas

12 bespoke planters and benches were designed, built and lined for the campus

The planters have successfully deterred parking and have contributed in making the campus a safer place

WOOD BlocX

Sustainability by design

Dedicated to providing a sustainable product

We are proud to work within an industry that is passionate about sustainability and are fortunate to provide a product that is primarily used for adding natural elements to the built environment.

All WoodBlocX timber is cut, drilled and treated at our sawmill, eliminating wood waste during construction on site. The waste products that are produced during processing, such as sawdust and bark chippings, are sold on for biomass fuel and bark suppliers. Our latest dowel design allows for WoodBlocX structures to be easily deconstructed and repurposed, providing an essential product feature to meet circular economy requirements.

WoodBlocX utilises strong timber components and recycled plastic fixings. All of our timber is Chain of Custody certified and 80% of it is sourced from within 30 miles of our sawmill in the Scottish Highlands.
