

HOW TO BUILD OUR PONDS

The key with any WoodBlocX build is to get the foundations level before you start. This allows you to easily build the layers of WoodBlocX as per your unique instruction pack (supplied with every kit).

With a pond it's a good idea to pad the base of your build with carpet or sand to remove any sharp angles which could cause dirt build up. Next, ensure that the liner is fitted over the dowels, making a cross to allow the dowel through the pond liner. Finally, hook the liner to the top of the BlocX's prior to fitting the capping.
