Building a raised bed has never been easier!

WoodBlocX raised beds and planters are easy to construct, and require no heavy lifting or power tools to build. The wood is pressure-treated to make it long-lasting.

Our modular timber system can be built on both soft and hard ground types including grass, soil, paving, decking and concrete. All you need is a suitably level and compact surface to build on.

Everything you need to build your raised bed is included with your kit including detailed layer-by-layer building instructions - just fill with good-quality soil and add plants!

Design your own raised bed using our [clever website calculator](#) or choose from our wide range of [pre-designed kits](#). We also offer a [Free Design Service](#) if you need something bespoke for your garden.

WoodBlocX raised beds do not have a base. We do not sell soil, plants or drainage material. We know every garden project is different so we leave these choices up to you.

We sell raised bed liner, tools and accessories to support your project

Free Design Service

Our Free Design Service is here to help you transform your garden. We can design bespoke raised beds and planters with seating, multiple tiers, curves and more!

Our design team will work closely with you to create a bespoke WoodBlocX design that fits your budget and space perfectly.

You are under no obligation to purchase by using this free service and we offer unlimited revisions until you are 100% happy with your design.

Every customer receives a personalised Design Pack which contains a technical drawing with a price including delivery and taxes.

We only create bespoke designs using our WoodBlocX product - we do not create landscaping plans such as planting, fencing or decking.

See our Customer Gardens to get inspired for your next project!

LOW-LEVEL

0.25 - 0.35m

2 to 3 WoodBlocX layers + capping

Perfect for borders & edging
Improves top layer of soil
Better affordability

**MOST
POPULAR**

MID-HEIGHT

0.45 - 0.65m

4 to 6 WoodBlocX layers + capping

Reduces bending when gardening
Deep soil with good drainage
Enhances your garden

HIGH / TALL

0.75 - 1.05m

7 to 10 WoodBlocX layers + capping

Maximum garden accessibility
Natural pest protection
Adds height to your garden

Choosing the best height

The most popular and versatile height for WoodBlocX raised beds is between 0.45m and 0.65m (roughly 1.5 to 2.5 feet). WoodBlocX builds in 10cm layers (with an extra 5cm for the top capping layer), allowing heights to range from 0.25m up to 1.05m. Tall raised beds (+0.75m) are the best choice for reducing back strain and accommodating deep-root crops.

Still not sure what height you need? Call us on 0800 389 1420 for help and advice

Ground fixing options

Refer to your layer-by-layer instructions for placement

Building on soft ground

When building your WoodBlocX structure on soft ground such as grass and soil, your kit will include **Ground Spikes** to secure your kit to the ground.

These are 400mm galvanised steel spikes that are hammered through the first layer of your design and are also located in every buttress support.

NOTICE - check your ground for hidden pipework!

Building on hard ground

When building your WoodBlocX structure on hard ground such as paving and concrete, your kit will include **Angle Floor Brackets** to secure your kit to the ground.

These are galvanised steel L-shape brackets that need to be screwed to the inside of the first layer of your design and are also located at the end of every buttress support.

We include 4 screws per bracket but you will need to source a suitable fixing to attach the bracket to your hard ground type.

Liner

To ensure the lifespan of your WoodBlocX structure, we strongly recommend you **install a liner**.

We sell a 4 x 5m raised bed liner on our website. One size only.

Drainage

We recommend **adding a drainage layer** such as gravel or hardcore, especially when building on hard ground types.

You can also layer logs, branches, and organic material at the bottom.

Soil

We recommend using a good-quality topsoil to fill your raised bed.
We do not sell soil.

Remember: healthy soil supports healthy plants so choose the best!

Timber treatment & ageing process

NO ANNUAL
TREATMENT
REQUIRED

Pressure-treated for durability

WoodBlocX is pressure treated with Wolmanit CX, a water-based preservative which fixes in the cells of the timber when it dries.

Your WoodBlocX raised bed should last up to 15 years without any annual maintenance (you must install a liner to create a barrier between soil and wood).

WoodBlocX may arrive damp / green. Don't worry, this is completely normal! After exposure to sunlight, your raised bed will turn a lovely golden brown that you see in our marketing photos.

WoodBlocX fades to a silvery/grey over time

The fading doesn't affect the quality of the wood.

There is no annual treatment needed but if you would like to add a splash of colour to the garden, WoodBlocX can be painted with any good quality exterior water-based wood paint. We recommend brands such as Cuprinol, Ronseal or Sadolin.
