

The image shows a rooftop garden installation using the WoodBlocX system. In the foreground, there are several rectangular planters and benches made of stacked wooden blocks. The planters are filled with various plants, including some with reddish-brown leaves. A black, cylindrical outdoor lamp stands on the paved area. In the background, a modern building with large windows and a glass railing is visible under a blue sky with some clouds. The overall scene is bright and sunny.

What is WoodBlocX?

Learn about our award-winning product

20 YEAR
DESIGN LIFE

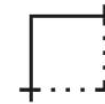

Modular timber system

WoodBlocX is a unique, patented system of interlocking timber blocks that can be used to design and build street furniture, raised planters and retaining walls. All projects are supplied as self-assembly kits for contractors to build.

Beautiful outdoor spaces

The WoodBlocX system is a popular option for Landscape Architects and contractors when specifying timber landscape structures. Transform any external space with ease using our sustainable modular components.

Free design service & support

Every project we supply is drawn in AutoCad, no matter the scale, so that our clients know exactly what they will be getting. We offer technical project support through our Free Design Service and we can generate full quotations within 72 hours.

From design to delivery

We're here to support you throughout your project

Step 1

We design your structure

Whether a project is at early stages of work, tendering or in construction. We will draw up a design and quote to suit. WoodBlocX is often specified by Landscape Architects at early project stages and design/pricing requirements are picked up during the tendering process.

Step 2

Designs are finalised

Once designs are finalised an order can be placed and a design sign-off is requested to ensure our clients know exactly what they are receiving. Payment is required prior to delivery of all materials.

Step 3

Material delivery

All WoodBlocX components are picked and packed onto pallets at our warehouse, these are then shipped to site on a date to suit our clients along with full technical installation instructions. Our admin team are on hand to support all aspects of the delivery process.

Step 4

Installation

WoodBlocX is a material supply-only company. We provide all required materials to build the WoodBlocX structures along with comprehensive installation instructions. We also provide technical assistance over the phone if required.

WOOD
BlocX
LANDSCAPING

Designed for your project

The ideal solution for landscape projects of any scale and budget

WoodBlocX walls are built with many individual pieces of timber (rather like bricks), that are pinned together using plastic dowels. Each piece of timber – selected to use only the strongest parts of the tree and never the heart – is then pressure treated twice, and because they are pre-drilled, the treatment penetrates almost 100% of the wood.

- A single wall will retain earth up to a height of one metre (approximately 3').
- WoodBlocX are light and easy to build - no power tools or cutting to assemble.
- Made from pressure-treated wood and are guaranteed 10 years.

WoodBlocX retaining walls can include steps

Steps are created using our capping and require no power tools to install

Retaining walls can be built up to a maximum height of 1 metre

This is to ensure strength and stability

Buttress supports for strength

These act as 'deadmen' with the weight of the soil pushing down on

WoodBlocX walls are flexible enough to withstand frosts and ground movement, and won't distort or crack under pressure. A single wall (the BlocX are 75mm wide) will hold earth to a height of 1m.

Sustainability by design

Dedicated to providing a sustainable product

We are proud to work within an industry that is passionate about sustainability and are fortunate to provide a product that is primarily used for adding natural elements to the built environment.

All WoodBlocX timber is cut, drilled and treated at our sawmill, eliminating wood waste during construction on site. The waste products that are produced during processing, such as sawdust and bark chippings, are sold on for biomass fuel and bark suppliers. Our latest dowel design allows for WoodBlocX structures to be easily deconstructed and repurposed, providing an essential product feature to meet circular economy requirements.

WoodBlocX utilises strong timber components and recycled plastic fixings. All of our timber is Chain of Custody certified and 80% of it is sourced from within 30 miles of our sawmill in the Scottish Highlands.

LANDSCAPING

Enhance educational settings

Our modular planters and furniture can transform outdoor spaces

Create unique designs for play, learning or zoning in early years, primary and secondary schools using our unique modular timber system.

Our raised planters and street furniture kits are made from sustainable timber and provide a safe, clean and zero-maintenance option for Landscape Architects looking for a solution for projects covering all types of educational settings.

WoodBlocX timber is pre-treated with a water-based treatment, making it ideal for growing edibles and flowers. The structures create a beautiful natural touch to playground areas that are often heavily hard landscaped.

LANDSCAPING

Create a rooftop garden

The smart choice for any rooftop site with access challenges

All too often a great design has to be amended beyond recognition because of the practicalities of the site. Restricted access, working around the public, keeping dust and noise levels low, tight deadlines – all these logistical problems and more can mean that the original vision is compromised.

However, when you want to add planters, raised beds, seating and benches to a problematic roof area, the solution can be found in our modular timber system.

WoodBlocX are easy to get onto the site, but they are also easy to work with once the components are there. All the individual pieces are pre-fabricated to exactly the right size, and pre-drilled and mitred as well.

LANDSCAPING

Create places for people

Design and build beautiful outdoor spaces with ease

WoodBlocX planters are regarded as one of the best products for creating green public spaces that enhance the area and the lives of those that interact with the installation. The unique modular design, pre-treated and pre-drilled timber, and strong dowels, combined with supportive inner buttresses prevents cracking, warping and movement.

For public space projects, our design team are on hand to work with you to create a WoodBlocX design that meets your requirements and deliverables.

The flexibility that our timber system provides in terms of design, combined with our Free Design Service makes WoodBlocX an attractive option for all types of public spaces.

Create wellness spaces

A timber product that's ideal for hospitals and healthcare settings

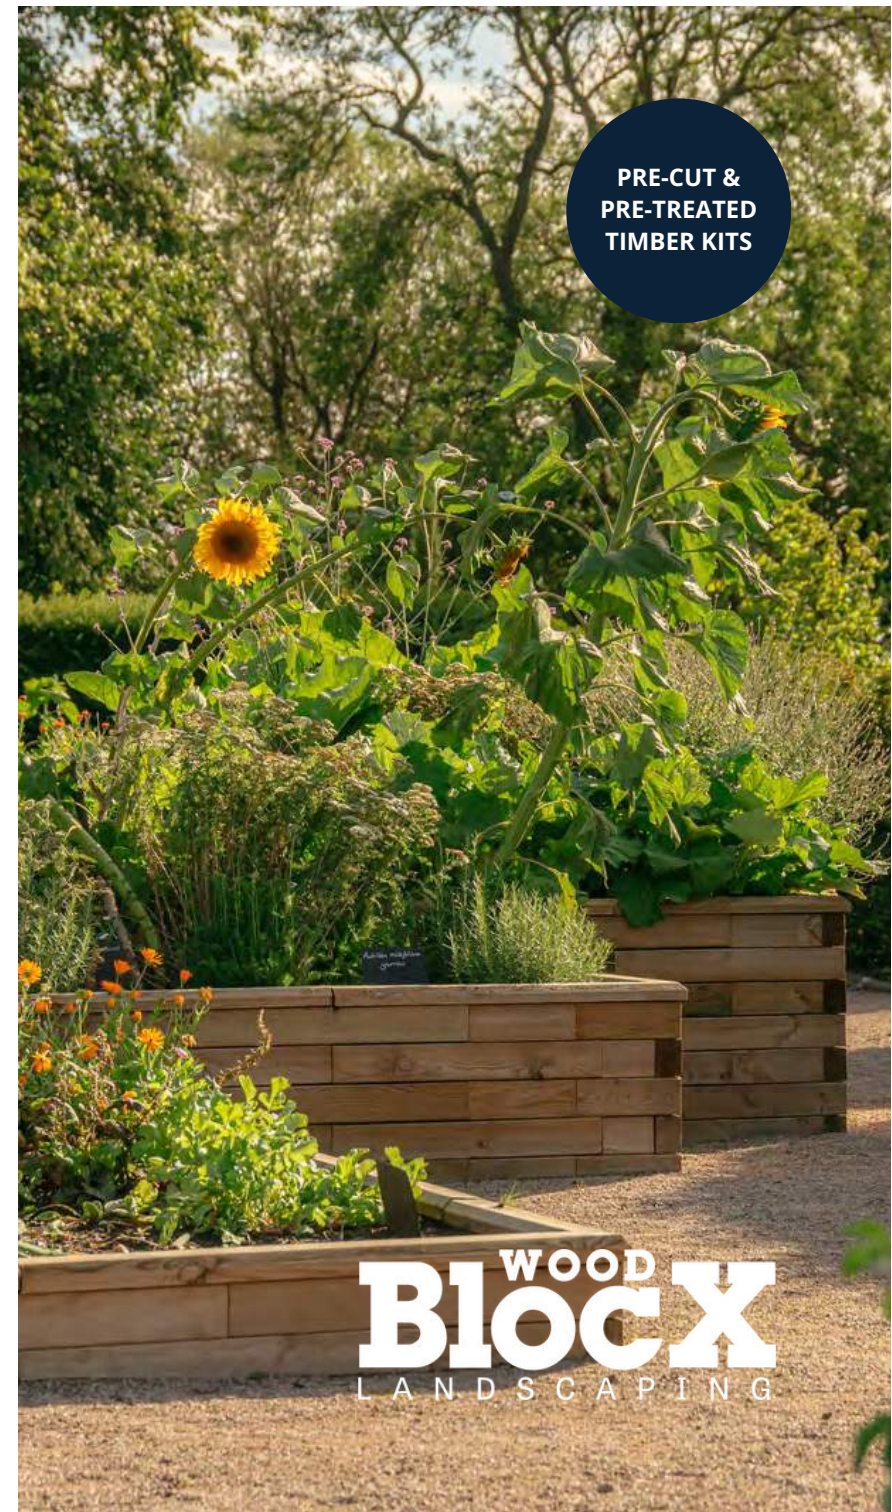

The flexibility that our timber system provides in terms of design, combined with our Free Design Service makes WoodBlocX an attractive option across all applications. For hospitals in particular, the pre-cut and pre-treated components that we supply will save significant time and money on labour and ensure minimum disruption to hospital footfall.

Built to last a minimum of 10 years, WoodBlocX structures are strong and durable, nor will they crack or warp. When built to our guidelines, they have a design life of 20+ years.

Our raised planters are also used extensively for hospital sensory and rehabilitation gardens to provide individuals with space for respite and wellness during their care.

WoodBlocX CPD sessions

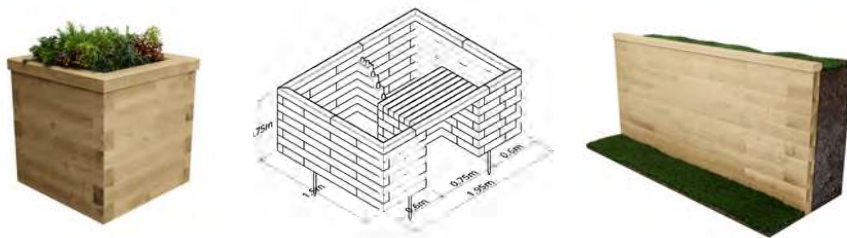

An introduction to our unique WoodBlocX system

We now provide two informative CPD sessions for Landscape Architects, Architects and construction professionals. Our RIBA accredited session covers the benefits of modular systems and we also provide an informal overview session covering our WoodBlocX product and its applications.

Both have been created to help professionals make the right decision when it comes to specifying modular timber products to create beautiful and sustainable landscape environments.

Remote CPD sessions can be arranged at any time that suits you with course content tailored to suit your project needs.

Get in touch for more information: cpd@woodblocx.co.uk

- RIBA accredited CPD available
- Learn about our WoodBlocX system
- Informal 30 - 40 minute session
- Company & project focused content
